

Clio® The Improved Way to View Bills in Clio

What are we releasing?

Clio has redesigned our entire Bill View page, and eliminated many of the time-consuming and tedious elements of pre-invoicing work for law firms. Invoice details and action-oriented commands are now in plain sight, page load times have been removed, and the editing of invoices during review and approval is now seamless.

- Essential information and case specifics, such as client address, are clearly presented to make the bill review and approval processes easier. Intuitive presentation details at a glance reduce the possibility of human error, and the need to recheck information.
- Bill edits are now instantly reflected in the bill view, eliminating any doubt of data entry and removing the need to double-check inputs, making data entry more accurate.
- No more need to scroll through pages to take multiple or single actions. Instead, take accurate actions with ease and speed.
- Individual bill load times are eliminated for an overall faster process.

Is this available to all Clio users?

Yes, this updated view will be available to all Clio users.

How do I access this feature?

- This feature is available from the Bill View tab in Clio.

Where can I learn more about this update?
